Revisions

Estimates have been revised for January through March. Changes in personal income, current-dollar and chained (1996) dollar DPI, and current-dollar and chained (1996) dollar PCE for February and March -- revised and as published in last month's release -- are shown below. Revisions for January to personal income and to PCE were small. DPI was revised up \$59.7 billion in January, which primarily reflected a downward revision of \$59.5 billion to personal tax and nontax payments (a subtraction in calculating disposable personal income). The revision to personal taxes was mostly accounted for by a downward revision to federal nonwithheld income taxes, reflecting newly available data through April from the Monthly Treasury Statement and revised projections for the remainder of the calendar year.

^p Preliminary.^r Revised.

1. Equals disposable personal income deflated by the implicit price deflator for personal consumption expenditures.

2. Population is the total population of the United States, including the Armed Forces overseas and the institutionalized population. The monthly estimate is the average of estimates for the first of the month and the first of

the following month; the annual estimate is the average of the monthly estimates. Estimates for January 1991 through June 2000 are interpolations between Bureau of Census population estimates for 1990 and for 2000; estimates for July 2000 forward are BEA extrapolations. BEA will substitute monthly Bureau of Census population estimates for 1991 forward when they are released in the first part of 2002.
